

ESIS AWARDS - CALL FOR NOMINATIONS

ESIS confers every two years the following awards:

- The Griffith Medal
- The Wöhler Medal
- The Award of Merit
- Honorary Membership

Every ESIS member can submit a proposal to the Awards Committee (to Aleksandar Sedmak, asedmak@mas.bg.ac.rs); the proposal has to be seconded by another member, however, from a country other than that of the proposer (and both should be from a different country than that of the candidate). The proposal shall include a detailed justification of the candidate, usually covering one to two pages. It shall also include a detailed CV of the candidate and a list of his/her five most important publications. Deadline for submitting a proposal will be February 24, 2018.

The Griffith Medal

The Griffith Medal is dedicated to researchers who have performed outstanding research in the area of fracture; this includes classical fracture mechanics, as well as numerical analyses and simulations. For example, the work to be selected could deal with new methods of analysis or experiments, including effects of environment and temperature; or with application of existing methods to new problems, such as novel materials/material systems and others.

The Wöhler Medal

The Wöhler Medal is dedicated to researchers who have performed outstanding research in the area of fatigue. For example, the achievements to be chosen may deal with micromechanisms of fatigue, including novel experimental approaches and modeling; predictive tools for fatigue life and others. Recipients of the foregoing awards are preferentially members of ESIS; exceptions require special justification.

The Award of Merit

The Award of Merit honors members of ESIS who have contributed outstandingly to the success of the Society; as an example, possible candidates could have performed successful long-term work in Technical Committees.

Honorary Membership

Candidates for Honorary Membership are not necessarily members of ESIS; they are leading experts in structural integrity.
